

**FOR IMMEDIATE RELEASE:**

### **AirRoad Set to Deliver Certainty to the Renewable Energy Industry**

*July 13, 2011*- AirRoad are delighted to announce that we will be an exhibitor at this year's All-Energy Conference in Melbourne on 12-13 October, where we will showcase our specialised transport solutions for the renewable energy industry.

With a distinguished heritage of providing express transport and logistics services to the high technology industry where the care of fragile and valuable product is paramount, our custom designed trailers feature twin decks that prevent freight compaction. Built with a larger cubic capacity, they are able to carry bulky freight and oversized pallets up to 2.25 metres high. All our linehaul vehicles are fitted with patented 'Air-Ride' suspension, ensuring a smooth ride. In addition, we are also able to provide sensitive freight and specialised transport services to a range of critical equipment.

Malcolm Thorpe, Managing Director, says, *"It makes good commercial sense to partner with a proven national specialised transport provider that delivers certainty through a consistently reliable, accountable and quality accredited service."*

An example of the AirRoad experience involves a valued client who is a world leader in renewable energy. Over a 12 month period, we successfully delivered over 12,000 of their solar panels throughout Australia, with 98.18% of their deliveries completed on time, with no structural damages or claims against our complimentary transit warranty.

We have subsequently expanded our involvement by supporting a range of clients in shipping solar panels and renewable energy equipment throughout Australia.

We completed our first carbon audit three years ago, and were winners of the Lloyds List 'Green Transport Award' and the ASCLA's 'Award for Environmental Excellence'. Since then, we have acquired hydrogen fuel cell engines, and introduced hybrid trucks to our fleet for local deliveries.
