

BCS Logistics Solutions

The BCS Group is a synergistic group of companies that specialise in materials handling and plant automation solutions including operations and maintenance primarily in the logistics and aviation industries.

From our inception in 1993, BCS has delivered innovative solutions using modern technology, whilst focusing on achieving optimum customer satisfaction with both our service and the performance of our systems. Our mission statement *"To look beyond the obvious"* reflects our objective to investigate all possible solutions for our customers.

BCS' business philosophy is centred on people. With over 250 staff across Australia and New Zealand, our people work hard on delivering what our clients and their people want and need.

Solutions

BCS Logistics Solutions specialise in a broad range of innovative, state of the art material handling systems and components suitable to all types of operations. This can be relatively small manual operations right through to large distribution and freight hubs incorporating sophisticated high speed sortation systems.

We are experienced in integrating check weighers and dimensioners, barcode scanners, telescopic conveyors and complex sortation equipment.

Many of our clients include almost all major freight and parcel handling companies across Australia and New Zealand as well as many airports in all parts of the world.

Our local project success includes total turnkey solutions for shoe sorters, tilt tray systems, cross belt sorters and other sorting solutions for large international clients located in Australia and New Zealand.

Services

BCS is one of the largest operations and maintenance providers in the Australasian market with approx 150 dedicated staff. We consider ourselves the industry leaders in this field and our methodology can be customised to suit any size of operation.

Business Evaluation & Performance

Our core expertise in automation, controls and simulation technologies give us a powerful platform to provide in-depth analysis of your current or future operations.

Typical consultancy projects would examine operational and process flows, constraints and requirements.
