Finally a Warehouse Management System to suit smaller operations

Do you manage a small to medium sized warehouse with a cumbersome, low-tech stock tracking system that you'd like to replace? Do the Warehouse Management Systems that you've looked at have too many 'bells and whistles' and a price tag to match? If you answered yes to these questions, then this new WMS may be just what your warehouse needs.

WITS is the new Warehouse Management System from TallShips Solutions Pty Ltd. It has been designed and built by this company who have more than 30 years experience installing systems at the top end of the warehousing and distribution market. WITS has all the functions that you will need to easily and efficiently streamline the operation of your warehouse, but without the complication of features that are of little use to the majority of businesses like yours.

What does WITS stand for? Not Warehouse Inventory Tracking System as you'd perhaps expect. WITS is actually an acronym for 'What's in the Shed' and like its name this system is simple and effective.

TallShips say that WITS is exactly what operators at this end of the market need. "In a nutshell," explained Doug Stracey, Managing Director of TallShips, "these companies want to know what's already in their shed, where it is, what's coming in and going out and what happened last month and the month before." And, that's what WITS delivers. It is a no-nonsense, easy to operate system that'll do everything you want it do, and probably a few more things you haven't thought of yet. And, the really good news is that it's affordable.

What's more there's no complex set up and endless modelling before you go live. You buy it, download it and away you go. Nothing could be easier. Without a doubt, WITS is the solution for you. To have a look at it, go to www.wits.tallships.com.au or call TallShips Solutions on (02) 9807 6077 to arrange an obligation free warehouse evaluation.
